

Using the WordPress Plugin

If you want to include your calendar as a sidebar widget, add it from your WordPress widgets page

If you want to embed your calendar on a page, click the localendar icon

from the WordPress page editor. Use the pop-up configuration screen to customize how your calendar will be shown.

Add Localendar

Localendar Username

Step 1: How do you want to include your calendar?

- a link to a **full-page** view of my calendar
- a **fully-interactive** embedded calendar
- a **static** (non-interactive) embedded calendar
- my calendar in an **<iframe>**
- an **interactive mini-calendar** with pop-up event balloons

Step 2: Select the style for your calendar.

Month Block-View

Step 3: Additional Customizations

Localendar also accepts a number of other query string parameters. If there are extra parameters that you would like appended to your URL, you can place them in the text field below. [Learn more about formatting your calendar URL.](#)

Extra Query Args

There are a variety of ways (see this [gallery](#)) you can publish your calendar on your WordPress site. You can learn more about customizing your calendar with out [Theme Editor](#) and [Custom CSS](#) elsewhere in this wiki.

Use the menu on the left to learn about other features such as [importing iCal feeds](#), [using custom images](#), and more.
