

Importing from Yahoo Calendar into localendar

Yahoo Calendar is able to import from a [localendar iCalendar feed](#), however Yahoo Calendar currently does not export to an iCalendar URL (like Google Calendar, [for example](#))

Yahoo Calendar can export to a static [iCalendar file](#). However, localendar currently cannot load a static iCalendar file.

If Yahoo Calendar adds support for a public iCalendar URL, then you should be able to import it into localendar by following the [Importing iCalendar into your localendar](#) directions.
